SQA ENGINEER INTERN ASSESSMENT

QuickBite

Requirements, Ambiguities & the SDLC

RoBenDevs

Md. Rahat Pervez | SQA Engineer Intern Candidate

The Product

A food ordering and delivery app connecting customers with local restaurants, from browsing to doorstep.

Cart & Coupons

Build a cart, apply a discount code before checkout

Checkout & Payment

Fees calculated, then paid by Card, UPI, Wallet or COD

Tracking & Cancellation

Live status updates, cancel within a set window

The Goal

Less cart abandonment, higher average order value

Ambiguities I Found

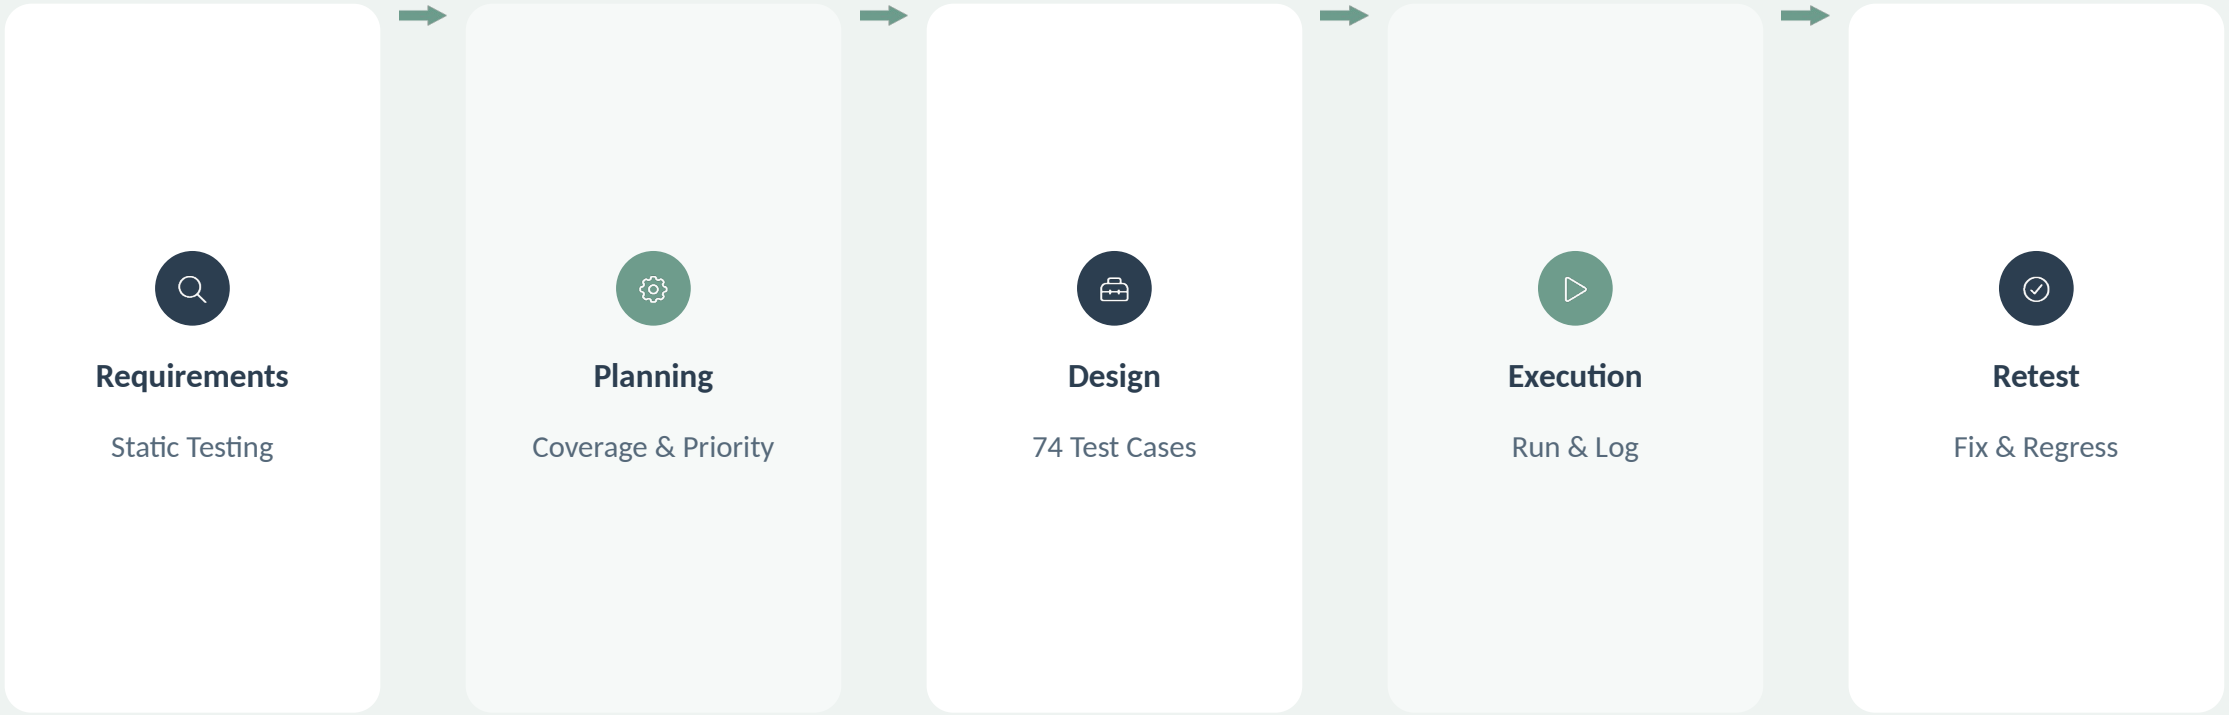

Threshold Conflicts

- Checkout minimum (100) vs. free-delivery threshold (99)
- "Above X" language — the boundary value is undefined

Missing Rules

- No refund rule defined for a cancelled COD order
- Guest checkout flow is left unclear

Testing Across the SDLC

Testing isn't a final phase — it's threaded through nearly every stage, starting from the very first line of the requirements.

Thank You

Happy to answer any questions
